More Than Just Scientists!

Roles in BIRA-IASB

- Climate Scientist
- Engineer
- Librarian
- PhD Student
- Principal Investigator
- Project Manager
- Science Communicator
- Space Weather Scientist

Example Card Design

Science Communicator

Handle press releases and organize exhibitions for the public, manage internal communications and organize social events for the institute. Making things "easy to understand" isn't always easy, but there's lots to learn from the scientists around you and there's tons of room for creativity!

How to get there

A degree in science, communication or journalism, and a passion to share with others the wonders of science

Librarian/Archivist

Support the research around BIRA by supplying documents and handling publications subscription/submission for researchers, in addition to taking care of the repository. There is a lot of responsibility and pressure in the small team of librarians, but you lead your own way in an international and exciting environment.

How to get there

A relevant undergraduate/internship/work experience, such as experience working in a library, and keen interest in supporting research work
